67. Some policy makers are proposing that the federal government increase affordable housing subsidies for families earning less than half of their communities' median income by \$2,000 per year. This would be paid for by a 0.03 percentage point increase in the income tax for all U.S. citizens. Supporters say this small tax increase would help 2.3 million working families afford decent housing and reduce homelessness for just pennies per day from taxpayers. Opponents say middle-class taxpayers shouldn't subsidize other people's rent when they're already struggling to afford their own housing costs. Do you support or oppose this policy?

68. Some state politicians are proposing that your state government require local governments to automatically approve housing projects within 60 days if they meet basic state building and safety standards, rather than allowing cities to require lengthy review processes that can take years. Supporters say this will make homes more affordable by cutting through red tape that adds unnecessary costs, and will still protect neighborhoods because projects must meet all safety and building standards. Opponents say this will stop neighbors from having a say when developers want to build next to their homes and won't actually make housing affordable because new construction is still expensive no matter how fast it gets approved. Do you support or oppose this policy?

69. Some advocacy groups in your city are proposing that your city eliminate single-family-only zoning rules and allow duplexes, townhomes, and small apartment buildings to be built in neighborhoods currently restricted to single-family homes only. Supporters say this will help working families find homes they can afford by creating more housing choices, and will bring more neighbors to areas that need housing for people who work locally. Opponents say this will change quiet residential streets by adding larger buildings with more residents, and won't actually help families afford homes because developers will still charge high prices for new housing. Do you support or oppose this policy?

70. Imagine there is a policy proposal where the federal government would give \$1,000 tax rebates each year to households in cities and counties that build enough new housing to keep up with their population growth. Under this proposal, households would get this money each year their city or county builds enough homes to match this growth. Do you support or oppose this policy?
